

AI Project 2: TAGGING

Rubén Reyes A. – 1382357

Marc Espinosa G. - 1495036

Algorithms Implementation

- K-Means Algorithm
- Labels Process
- Optional: BestK + Fitting

Complete analysis of 200 images

- We've designed a script to make the analysis
- We used "first" initialization
- We test with "single_thr" = 0,25 and 0,75
- The images given were ".png" in RGB
- We test a pair images to show deeper details
- We use global graphics to analyse all the information

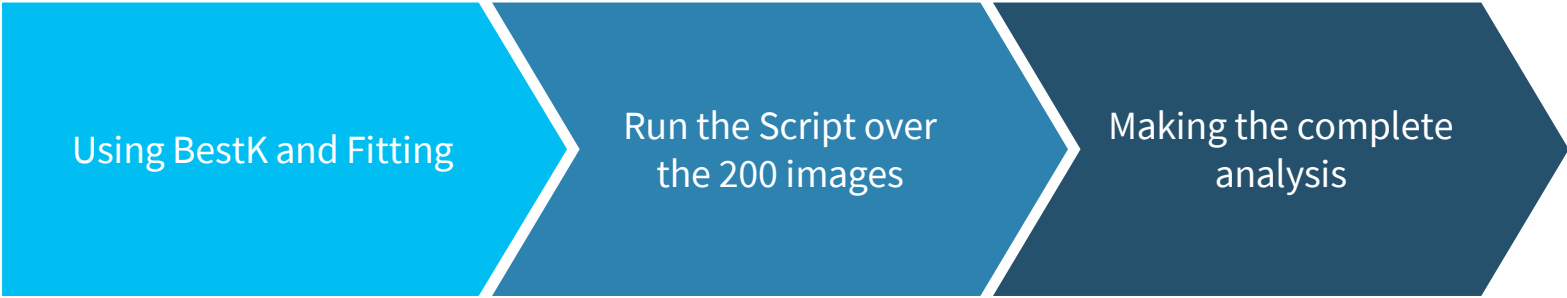

OUR PROCESS ROUTE

3

Using BestK and Fitting

Run the Script over
the 200 images

Making the complete
analysis

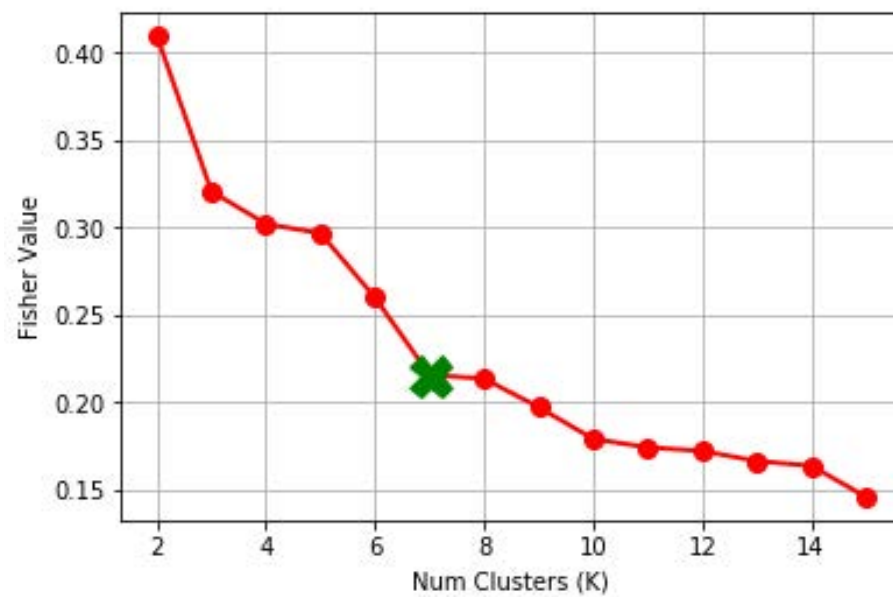

```
graph LR; A[Using BestK and Fitting] --> B[Run the Script over the 200 images]; B --> C[Making the complete analysis];
```

1.

HOW WE GOT BEST_K AND FITTING WORK ?

We used Best_K and Fitting to make the analysis

$$DiscriminantFisher = \frac{IntraClassDistance}{InterClassDistance}$$

This is the result of running BestK, Fitting and Plot_Results.

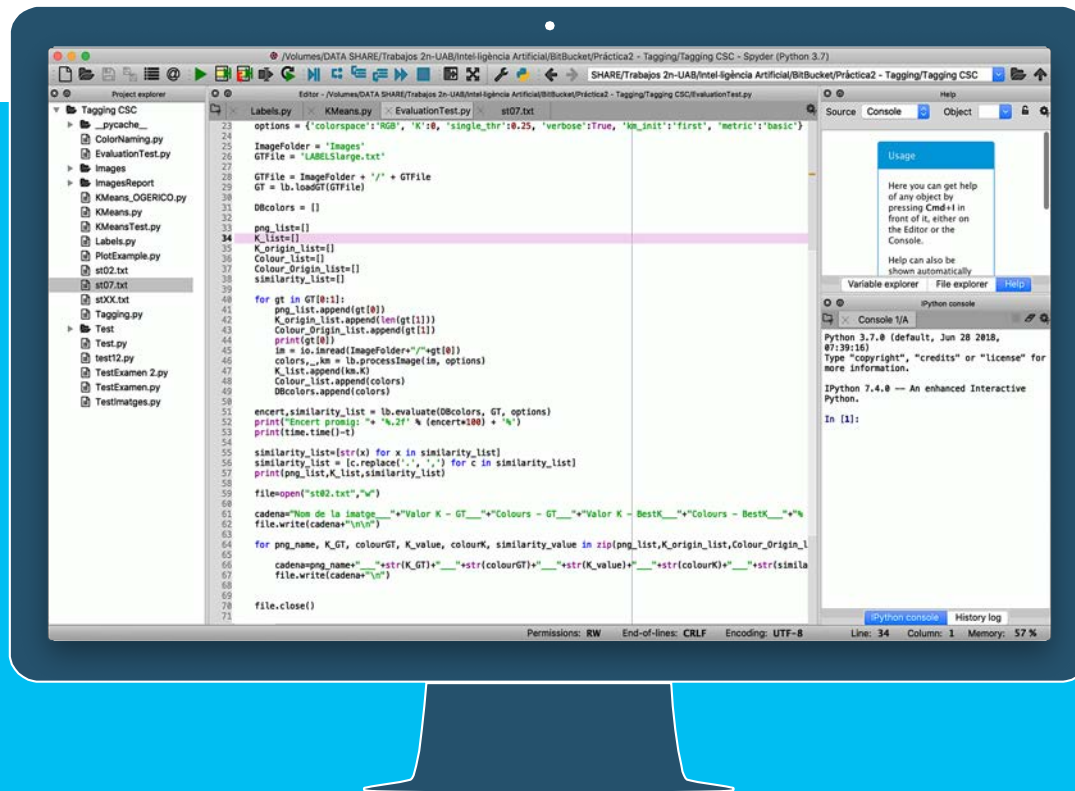

2.

HOW HAVE WE PREPARED EVERYTHING?

We've prepared an script to get all the results

USING EVALUATIONTEST.PY

We modified the script
to save all the results
in .txt

USING EXCEL

And then, we managed
all the data and we
make different plots

	A	B	C	D	E	F	G
	Nom de la image	Valor K - GT	Colours - GT	Valor K - BestK	Colours - BestK	% Similitud	
1		0	7 ['Brown', 'BrownWhite', 'Green', 'Orange', 'OrangeYellow', 'Red', 'Yellow']	6 ['Orange', 'Purple', 'Green', 'Yellow']		75%

5.

CONCLUSIONS OF THE PROJECT

- » A lot of working hours invested
- » More knowledge about programming AI
- » Learn about making a complete analysis

AI Project 2: TAGGING
